CSE0001
Digital Literacy

Digital Literacy Project Report

School: SCOPE

University: Vellore Institute of Technology

Name: Divyanshi Mishra

Registration Number: 25BCE11266

Branch: B .Tech Core

Date: 26/03/2026

INTRODUCTION

This project focuses on developing digital literacy skills, which are essential in today's technology-driven world. As a student digital ambassador, the aim of this project is to understand how to use digital tools responsibly, communicate professionally, and stay safe online.

Through various tasks, I explored important aspects such as creating an infographic, building a digital portfolio, practicing coding, understanding email etiquette, and learning about cybercrime awareness. This project helped me gain practical knowledge and improve my digital skills.

Task 1

For Task 1, I created a digital literacy awareness infographic using Canva. The aim of my design was to present important concepts of digital literacy in a simple and visually appealing format so that students can easily understand them. The infographic includes key topics such as the meaning of digital literacy, its importance, safe internet practices, professional online presence, and email etiquette.

I chose Canva because it is user-friendly and provides a variety of templates, icons, and design elements which helped me create an attractive layout without any prior design experience. I used a minimal color scheme and relevant icons to make the infographic more engaging and easy to read.

While creating the infographic, I found it slightly challenging to organize all the information in a clean and structured way without overcrowding the design. However, this task helped me improve my creativity and understanding of how to present information effectively using digital tools.

Task 2

For Task 2, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence and showcasing skills and projects.

GitHub helps me store and share my coding projects, while LinkedIn is useful for creating a professional profile and connecting with others in the academic and professional community. Kaggle is a platform where I can explore data science and improve my problem-solving skills.

I chose these platforms because they are widely used by students and professionals. In the future, I plan to regularly update my profiles by adding projects, improving my skills, and connecting with more people. This will help me in internships and career opportunities.

Task 3

For Task 3, I explored coding and collaboration platforms. I used HackerRank to practice basic Python programming and completed a beginner-level problem. This helped me understand the basics of coding and improve my problem-solving skills.

I also created a Google Form quiz on digital literacy awareness. The form included multiple-choice and short-answer questions related to safe internet practices and digital skills. This activity helped me understand how to create and share online forms for educational purposes.

These platforms are useful for improving technical skills and collaborating with others. In the future, I plan to use these tools regularly to enhance my learning and academic performance.

Task 4: Email Etiquette and Social Media Responsibility

Social Media Do's and Don'ts

Do's:

- ❖Use respectful language online
- ❖Keep profiles professional
- ❖Verify information before sharing
- ❖Protect personal information
- ❖Use strong privacy settings

Don'ts:

- ❖Do not share OTP or passwords
- ❖Avoid posting inappropriate content
- ❖Do not spread fake news
- ❖Avoid cyberbullying or trolling
- ❖Do not click on suspicious links

Reflection

One situation where poor digital communication can cause problems is when a person sends a rude or unclear email. This can lead to misunderstandings and may affect relationships or opportunities. For example, using informal language or not including proper greetings can create a negative impression.

To avoid such situations, it is important to use polite language, clear structure, and proper email etiquette. Communication should be respectful and professional to ensure clarity and maintain a positive image.

Task 5

In Task 5, I studied a cybercrime case related to UPI fraud. It explained how scammers trick users into sharing OTPs or approving payment requests, leading to financial loss.

Reflection

While researching about cybercrime, I was surprised to learn how easily people can be tricked into sharing sensitive information. Many scams look very real and can fool even educated users. This made me realize the importance of being alert while using digital platforms.

One habit I will change is being more careful before clicking on any links or sharing any information online. I will always verify the source and ensure that I do not share personal or financial details with anyone.

Conclusion

This project helped me understand the importance of digital literacy in everyday life. I learned how to use digital tools effectively, communicate professionally, and stay safe from cyber threats. It also improved my confidence in using online platforms like GitHub, LinkedIn, and Google Forms. Overall, this project was a valuable learning experience that will help me in my academic and professional journey.
